PERSONAL STATEMENT

MSc Computer Science (Artificial Intelligence), with research on demographic fairness in AI-generated synthetic facial data for age-estimation systems. I built a generative pipeline and evaluated its failure modes across ethnicity, gender, and age group, then stress-tested the same question against commercial text-to-image models in a follow-up study with my supervisor. Alongside this, I completed a placement as a Data Scientist in the construction industry, prototyping data infrastructure and an LLM-powered AI layer for a company looking to improve efficiency and decision – making by making use of scattered cost data in spreadsheets to a centralised database. I'm comfortable working across both research and applied engineering, and translating technical work for senior, non-technical stakeholders.

EDUCATION

MSc Computer Science (Artificial Intelligence), University of Kent

2024 – 2026

- On track for a Distinction.
- Modules include; Systems Architecture, Machine Learning Algorithms, Programming for AI with Python, Deep Learning, Data Mining.
- Built a three-stage generative pipeline (Stable Diffusion XL, AgeTransGAN, CodeFormer) for synthetic facial age-estimation data; evaluated failure modes and demographic fairness (FairFace, InsightFace, FID) across ethnicity, gender, and age group, then stress-tested the same question against commercial generative models (GPT-Image-1, Midjourney, Stable Diffusion) in a follow-up comparative study with my supervisor. Research paper can be found [here](#).

BSc Business and IT, Jomo Kenyatta University

2018 – 2022

- Achieved Upper Second-Class honours.
- Relevant modules and grades: Data Structures and Algorithms (A), Object-Oriented Programming (A), Computer Security and Cryptography (B), Human-Computer Interaction (B).
- Final Year Project: Architected and deployed a full-stack FinTech web application (Django, Stripe API), implementing tokenised payment processing.

SKILLS

- **Machine Learning & AI:** PyTorch, TensorFlow, scikit-learn, generative AI (diffusion models, GANs), LLM tooling (Groq API), model evaluation, fairness/bias evaluation.
- **Programming & Engineering:** Python, SQL, SQLAlchemy, Alembic, FastAPI, Django, Flask, APIs, Git.
- **Data Engineering & Modelling:** data pipelines (ETL/ELT), star schema design, database design (SQL Server, Azure SQL), data cleaning & validation.
- **Data Analysis & Visualisation:** Power BI, DAX (basic), Matplotlib, Seaborn
- **Professional Skills:** Stakeholder communication, translating technical concepts for non-technical audiences, problem solving, independent project ownership

EMPLOYMENT

Data Scientist, Costplan Group

09/2025 – 09/2026

- Investigated how the company could better use its cost data, which was unstructured, inconsistent, and scattered across individual project spreadsheets.
- Designed and built a proof-of-concept centralised database and ETL pipeline, exploring how benchmarking across projects of similar scope could work once the data was structured.
- Built interactive Power BI dashboards as part of the proof of concept, visualising project performance to demonstrate the value of centralised data to stakeholders.
- Prototyped an LLM-powered natural-language query assistant (Groq), exploring whether non-technical stakeholders could query the data directly, with guardrails restricting execution to read-only, single-statement queries.
- Prototyped an AI-assisted report generation service, aimed at reducing the time spent on manual, repetitive client report writing; tested whether LLM-drafted narrative could be reliably grounded in database-sourced figures without hallucinating numbers.
- Presented the full proposal and proof of concept to company directors; signed off as a two-phase project extending into an AI-powered natural-language layer.

Work Experience, Costplan Group

04/2025 – 09/2025

- Defined requirements and produced the project brief for an internal training platform, including an eLearning module on phishing attacks.

Project Coordinator, AfroCloud Technologies

12/2023 – 08/2024

- Managed three 6-month client projects end-to-end, collaborating with international NGO partners (EMS, DSW) through consistent delivery and communication.

HOBBIES AND INTERESTS

- **Reading thriller novels:** I enjoy diving into captivating stories that keep me on the edge of my seat, providing a great mental escape.
- **Gym:** I love the challenge it brings and the strength and discipline I cultivate from it.
- **Hiking:** Enjoy challenging outdoor hikes and exploring new landscapes; one highlight this summer was hiking Hastings Country Park.
